Due to the fact that inherited gene mutations are responsible for breast and ovarian cancer in 1-3% of all ovarian carcinoma patients, the analysis of these hereditary breast and ovarian cancer predisposing genes BRCA1 and BRCA2 is recommended in these patients. In case of a positive result of BRCA1 or BRCA2 mutation analysis, prophylactic oophorectomy and mastectomy as well as, in case of a positive result of both tests, also chemotherapy should be performed. The authors present a case report of a 42-year-old female patient with a positive BRCA1 mutation test result, who underwent primary prophylactic bilateral oophorectomy as well as no further treatment and follow up. ### What's New In?

Add line to dxf, then change to any other drawing: Use contextual help from your file. Adjust geometry settings such as thickness from a single line or from a selection of points. (video: 0:38 min.) Improved Render: Handy 3D look-up tables for metal and glass: Improve the appearance of your drawings with a multitude of different glass and metal surfaces. Download the free Sample Files to get started. (video: 1:48 min.) Show layers and other drawing information on the active layer when in an editing context: Drawings are now easier to understand by displaying layer information at the active point (or in a specific context). So, for example, you can use the Select tool to select the wall of a room, then use the Rectangle tool to draw a rectangle over that wall. In AutoCAD 2023, the rectangle will be on the wall, and the information about the wall layer will be displayed, to ensure you're working on the correct layer. (video: 0:30 min.) Copy complex paths to keep them organized: Do more with copy path operations than ever before. Now you can copy complex paths quickly, such as curved paths, and maintain organization. Combine multiple paths and copy each one separately. (video: 1:30 min.) Improved BOM Import: Import part numbers and part numbers and comments: Import part numbers and comment information so you can more easily search for and identify them when looking for parts. (video: 0:55 min.) Rasterize rotated lines: Rather than just mirroring and drawing rotated lines, now you can easily place and rotate lines automatically. Simply draw lines on your layer, then select the Rotate tool, use the Rotate option, and set the angle to the rotation angle you want. (video: 1:50 min.) Undo and redo commands: Quickly switch to undo or redo mode, with a dedicated Undo command. You can also select any text and change or copy text. It's quick and easy to choose the text, then select a new point to paste it. (video: 0:59 min.) More efficient command history: Expand and collapse command history lists with a single click.
