Season of War is a 1970 horror adventure game written and published by Mattel. The game was one of the earliest examples of a graphical adventure game and was released both on a video game console and as a standalone board game. Development Before the development of Season of War, Mattel had previously produced Deckbuilding, an evolution of the board game Trivial Pursuit and inspired by the national game of the same name. Mattel soon expanded the board game to have more twists, adding cards and letter tiles to it. Mattel soon released both games in combination for a combined priced board and cards, generating the idea of a video game based on the experience of the board game. Season of War was their first video game. Gameplay The concept of Season of War revolves around its soundtrack, which was composed by Bill Barth and features the theme music "The Battle Cry of Freedom", created by musician Lenny LaCour. The game features no actual directions, which is

considered a major limitation of the game as a result. The players of the game must move between rooms and have to make correct guesses about their character's condition and degree of involvement, which determines how much progress the player makes during the game. The player often has to guess if it is a question of a pebble, a stone, a grain, a book, or a mortar which has fallen from a wall. The player must then decide whether to continue or to choose a course of action which involves a search in the room below. Each room in the game is represented by a 12-by-12 grid; the room can be boarded up or left as it is. Rooms cannot be flipped between; players must go from one room to another. In an earlier version of the game, rooms had to be traversed in a left-to-right and a top-to-bottom sequence; this was changed to the present, in-game, method of traversing based on a north-south and east-west diagonal sequence. In certain rooms in the game, blank spaces in the grid represent multiple rooms, which are separate grids but accessible only from one room; these rooms can be necessary

in some of the game's puzzles. The player must make their choices of which rooms to enter before hand, for instance, if the player has managed to obtain a book. If the player enters the wrong room by mistake, they must choose a path back to the location they came from; the last room a player enters
